Retirement Is No Time To Slow Down

When advanced knee or hip pain severely limits your ability to walk, work or enjoy leisure activities, joint replacement should be considered.

In its early stages, joint pain may be relieved with anti-inflammatory medications, injections or arthroscopic surgery. However, as pain progresses, joint replacement surgery may be the best solution for long-term pain relief.

Could you be a candidate for hip, knee, shoulder or other joint surgery?

Hip

- Do you have hip, groin, or thigh pain when walking or standing?
- Have you noticed a loss of motion of your hip?
- Does your hip or leg pain limit what activities you may participate in?
- Do you have difficulty getting up from a chair or going up steps due to hip or leg pain?

Knee

- Does your knee swell or feel "stiff" after activity?
- Do you have knee pain during or after activity?
- Does your knee "pop" or "crunch" when you move it?
- Does knee pain limit what activities you participate in?

Shoulder

- Have you noticed a loss of motion in your shoulder?
- Do you have pain in your shoulder when you lift objects?
- Does shoulder pain limit what activities you participate in?
- Does your shoulder "pop" or make "crunching" noises when you move it?

If you answered "YES" to two or more of these questions, you should consider seeing your physician or orthopedic specialist about whether knee or hip replacement may be right for you.

Joint Care...for life!
