## Kids sell handmade items

Thursday and Friday Amber Manner, Gracie Class, Abbi Miller, Andy Miller and Dominigie Johnston sat up shop in the heat of the day on the intersection of Bressler and Bird Ave. They had fun attracting customers and selling handmade leather ing a sign in the middle of the to do with the money, Amber

goods as Fathers Day Gifts.

Amber Manner and her grandpa, Neil Critchfield, Colorado Springs made an assortment of items such as cell phone cases and billfolds out of leather.

Abbi's brother Andy was wav-

posted, saying "Great Fathers Day Gifts.'

Dominiqe was holding a smaller sign, and the others were showing the leather goods.

When asked what they planned

intersection where the signs are said half of the money was going to her grandfather to pay him back for purchasing the leather for the supplies. She would split the profits with the others for helping her sell the gifts.

#### Farmers gather for wheat plot tour

By Karen Krien karen.k@nwkansas.com

About 60 farmers gathered at the K-State wheat plot tour on the Sunny Crest Farm south of Wheeler Wednesday afternoon. It was hot and the wind was blowing but that didn't deter the people from com-

This has been an unusual year with cooler and wetter weather than normal. Consequently, there are different conditions for the test wheat plot. Additionally, profile moisture also played a big role in wheat

growth this year. The general consensus was the test plot looked very good. Jim Shroyer, K-State agronomist, said, while the plots looked good, they didn't look quite as good as they did last year. He estimated that the wheat in the plots would average 60 to 70 bushels per acre. Last year, the wheat had averaged 82 bushels per

Jeanne Falk, K-State multi-county agronomist, had planted 20 varieties and a seeding rate study with 35 to 75 lbs/ac of TAM 111.

Dr. Shroyer, talked about the varieties planted, giving a short history of each type of seed, along with it's strengths and weaknesses to environmental conditions and diseases. Varieties planted included: Art, PostRock, SY Gold, TAM 111, Armour, Cedar, Hitch, Smoky Hill, Winterhawk, Everest, Fuller, Jagger, Overley, Bill Brown, Hatcher, Ripper, T-140, T-158, TAM 112 and AP 503 CL2.

When asked for recommendation on the wheat varieties to look at next year, the speaker told producers to think about their management systems. One way is to choose varieties that have a level resistance to many diseases, including stripe rust. Those varieties include TAM 111, Winterhawk, and Armour. However, producers need to keep in mind that stripe rust may not be a disease that is present every year.

CHEYENNE COUNTY wheat plot south of Wheeler showed good stands of wheat on Wednesday, June 15. Dr. Jim Shroyer, K-State agronomist, left, answered some of the wheat questions asked by Spencer Schlepp, county farmer, and Jeanne Falk, K-State agronomist. One of the owners of the plot, Tom Smull, checked out some of the other wheat.

riety that has a good yield history in variable environmental conditions (ie drought), but has some level of susceptibility to stripe or leaf rust. By doing this, producers know they may need to spray for these diseases in some years. These tend to be varieties that have a good yield history and producers feel comfortable planting. These varieties include PostRock, Fuller, and TAM 112.

Last year, the wheat yielding the highest in the test plot was Winterhawk with 96.4 bushels per acre. Coming in second was TAM 111 with 94.7 bushels.

Jeanne said she had checked a number of fields after calls asking about wheat streak mosaic. To control wheat streak mosaic, she said, Another way is to choose a va- is to control the volunteer wheat. However, one of the challenges and Bird City Times.

The wheat curl mite moves the wheat streak mosaic virus and lives in volunteer wheat. The worst case scenario for infections of wheat streak mosaic is to spray volunteer wheat less than 2 weeks before planting. In this case, the volunteer wheat is dying just as the new wheat is emerging. This causes the wheat curl mites to move directly into and transfer the virus into the

Alan Schlegel, agronomist at the K-State Research Center in Tribune, also spoke at the wheat plot tour. He discussed three long term studies at Tribune addressing tillage systems and crop rotations. He said in a 3-year rotation, a complete no-till system had the best yields for the summer crop. Herald staff photo by Karen Krien

with this system is getting wheat established and a good stand. They are addressing this challenge with a study looking at limited shallow tillage just prior to wheat planting.

Finally, Jeanne asked what producers would like to see in the test plot next year. This plot is set up to be a place to address producer questions and learn how wheat responds in our own backyard. If you have ideas, please contact Jeanne or the Extension Office.

Following the wheat plot tour, farmers went to Goodland Greenline in Wheeler where they enjoyed supper provided by the county grain dealers.

When the wheat test plot is harvested, the results of yields will be printed in The Saint Francis Herald

### E-waste collection planned for Friday

By Karen Krien

karen.k@nwkansas.com

It has been 6 months since the last e-waste collection in Chevenne County. Now, another collection has been set for Friday, one in the morning at Bird City, and the other in the afternoon in St. Francis.

People have been asking about having another e-waste collection, said Roger Jensen, county representative for the eight-county Northwest Kansas Regional Recycling organization. There are some people who have gone to Colby with their e-waste items, he added.

E-waste collection is set for Friday from 9:30 to 11 a.m. at the city shop in Bird City. In St. Francis, people can take items to the recycle center from noon to 2 p.m. For more information, call Roger Jensen at 785-332-5011.

In the past, grant money has paid for the collection of run out. This time, there will 5011.

be a charge to those bringing in items.

Both the Bird City and St. Francis city councils did not feel that they could contribute to helping with the costs. However, the county commissioners agreed to split the cost of 25 cents per pound, paying 12.5 cents of every pound collected on Friday.

Mr. Jensen noted that the 25-cents charge is for the cost of transportation.

Some of the items considered for e-waste collection are: computers, parts and accessories, printers, scanners, fax machines, copy machines, telephones, cellular phones, answering machines, televisions, stereos, DVD and VCR players, speakers, radios, tape recorders, satellite receivers, toner and ink-jet cartridges, computer games and rechargeable batteries.

For more information, conthese items but that grant has tact Mr. Jensen at 785-332-

#### Team travels to meet

The Cheylin swim team par-short free, 36.90, third. ticipated in the meet in Atwood on Saturday, June 18. Atwood volunteered to hold this meet in their new pool.

Each of the four Cheylin swimmers earned at least two ribbons on Saturday with Diana Garcia and Tia Sager earning first place

ribbons. Results from Atwood include

the following: MaryAnne Orten, 13/14 age division, long free, 89.34, second; breaststroke, 47.00, second;

Diana Garcia, 11/12 age division, backstroke, 49.35, first; breaststroke, 54.01, third; short free, 41.95.

Trent Howland, 8-and-under, breaststroke, 59.13, second; free, 42.08, sixth.

Tia Sager 19-and-over, backstroke, 42.45, first; breaststroke, 47.11, second; individual medley. 92.64, first.

The next event will take place in Benkelman on Saturday.
