Precautions needed for hot weather

The Kansas Department of should never be left in a hot, closed Health and Environment (KDHE) car or near a sunny window. Also, is reminding Kansans to protect young children should wear a sunthemselves in hot summer tem-

"KDHE advises the best defense against heat-related illness is prevention," said Roderick Bremby, secretary of the department. "Staying cool and making simple changes in your fluid intake, activities and clothing during hot weather can help you remain safe and healthy.'

Heat is the number one weatherrelated killer in the U.S. The National Weather Service statistical data shows that heat causes more fatalities per year than floods, lightning, tornadoes and hurricanes combined.

"When temperatures start to rise, it's important to know how to protect yourself and others, especially those who are at greater risk of heat-related illness," said Dr. Jason Eberhart-Phillips, State Health Officer. "If you have a friend, relative or neighbor who doesn't have airconditioning, now would be a good time to talk with them about getting into a cooler place."

People who face the highest risk of heat-related illness include infants and young children up to four years of age, adults over age 65, people who have chronic medical conditions (such as heart disease or being overweight), those taking certain medications and people who work or exercise in extreme heat.

Heat-related Illness

Heat-related illness is always of concern during hot weather, and may be characterized as heat stress, heat exhaustion or heat stroke.

 Heat stress includes faintness, painful muscle spasms and cramps and prickly heat caused by a skin rash from clogged pores. Heat stress is caused by loss of fluids and minerals in the body needed for proper

• Heat exhaustion, which is more serious, includes headache, dizziness, clammy skin, muscle fatigue, chest pain, breathing problems and nausea. Medical attention is necessary if these conditions persist.

 Heat stroke is a life-threatening condition that should be considered an emergency. Headache, hot and dry skin, temperature of 103 degrees or higher, rapid and shallow breathing, disorientation and changes in consciousness are all symptoms of heat stroke. The person should be cooled quickly with cold, wet sheets or a cool bath and taken to the nearest hospital.

Staying Cool

Follow these steps to minimize your risk of heat-related illness:

• Drink plenty of fluids, especially water. Avoid alcohol and caffeinated beverages, which dehydrate the body. Drink at least a gallon of water a day when spending time outdoors.

• Wear loose-fitting and light-

colored clothing. • When children play outdoors, dress them lightly, and make sure they take frequent breaks indoors and drink plenty of fluids. A child

- sures such as wearing sunglasses to limit UV radiation.
- Create airflow in hot indoor work areas.

• Spend most of your time indoors and in an air-conditioned room. If you do not have air conditioning, many larger communities have places where you can go during heat waves including the local health department, senior citizen center, hospitals and Red Cross. Also, basements are usually cooler than ground-level floors.

For more information on dealing with extreme summer heat, visit the Centers for Disease Control and Prevention Web site at http://www. bt.cdc.gov/disasters/extremeheat/ index.asp.
