Summer heat can be a killer

Wednesday, July 26, 2006

Summer heat can kill. Soaring daytime temperatures, especially if accompanied by high humidity, greatly increase risk of heat exhaustion and heat stroke.

Heat exhaustion is typically caused by the body's inability to sweat enough to cool itself. Signs of heat exhaustion include heavy sweating, fatigue, weakness, dehydration (thirst), paleness and feeling dizzy or lightheaded.

As the body's cooling system fails, risk of heat stroke increases. Symptoms of heat stroke can include hot, dry skin that may be flushed, but is not sweaty. Other signs are a rapid heart rate, headache, dizziness, nausea, confusion, loss of consciousness and high body temperature (103-105 degrees).

Heat stroke can cause permanent physical impairment or death. If it's suspected, find immediate help.

While waiting for help to arrive, other good steps to take include:

- Move the person indoors or into the shade.
- Loosen clothing.

'Building Character'

The men's group in our church is using for their study Rick Warren's "Purpose Driven Life" on DVD and this last session was so good I want to share some of it with you. Do you realize God has a purpose behind every

problem? The Lord uses circumstances to develop our character. We face circumstances twenty-four hours a day so they are a good learning tool.

Jesus warned us we would have problems in the world. No one is immune to pain or insulated from suffering, and no one gets to skate through life problem-free. The Apostle Peter assures us that problems are normal, saying, "Don't be bewildered or surprised when you go through the fiery trials ahead, for this is no strange, unusual thing that is going to happen to you."

Because God is sovereignly in control, accidents are just incidents in God's plan for you. Because every day of your life was written on God's calento you has spiritual significance.
