It's 3 a.m. and there's a freight train running through your bedroom.

Loud snoring – yours or someone else's – can be a sign that something is seriously wrong with breathing during sleep. Snoring and other sleep-related disorders such as sleep apnea, narcolepsy or restless leg syndrome, affect nearly one out of three Americans, making their sleeping or waking hours miserable. Sleep disorders may lead to other major medical problems including high blood pressure and cardiac difficulties.

How's Your Sleep?

- Excessive daytime sleepiness
- Loud snoring
- Breathing cessation or gasps for breath at night
- Uncontrollable attacks of sleepiness
- Trouble at work or school because of sleepiness
- Muscle tension, aching, crawling sensations in legs when trying to sleep
- Leg twitching or kicking at night
- Inability to fall asleep or stay asleep at night
- Depression or fear of falling asleep
- Interruptions to your sleep

Many people suffer needlessly simply because they are unaware that a problem exists. Once detected, most sleep disorders can be corrected. If you answered "yes" to any of these conditions, the Sleep Center at Hays Medical Center can help determine if you have a sleep disorder. Discuss your sleep problems with your primary care physician, or call the Sleep Center at Hays Medical Center today for more information about sleep disorders or scheduling a sleep evaluation.
